

CORIMERPIN 9063

Self pH-regulating deliming agent, nitrogen-free

Base: organic esters

Appearance: clear liquid

MODE OF ACTION:

CORIMERPIN 9063 will be hydrolyzed to an organic acid and alcohol by the alkalinity that is contained in the pelts. During the deliming, the pH-value will not come under 8. The hydrolyzed substances are easily biodegradable.

CORIMERPIN 9063 penetrates the pelts quickly and ensures a rapid and thorough neutralization and removal of the lime hydrate.

The pelt deswells in similar way like when ammonium salts are used.

CORIMERPIN 9063 obtains a fine, clean grain; precipitations of gypsum are avoided.

APPLICATION:

Field of application:

CORIMERPIN 9063 is used as a main deliming agent even on unsplit full-substance pelts.

QUANTITIES TO USE:

split cow pelts: 1,5 - 2,5 % CORIMERPIN 9063, based on the pelt weight

unsplit cow pelts: 2,5 - 3,5 % CORIMERPIN 9063, based on the pelt weight

HINT OF APPLICATION:

When processing raw material with a particularly high natural fat content, a degreasing with a non-ionic surfactant (e.g. HYDROPHAN 9180) during the deliming and/or the subsequent bating is recommended.

STORAGE HINT:

Protect from cold.
