

MERPIN 8010 N

Low-foaming soaking auxiliary for salted hides and skins

Base: low-foaming emulsifiers and various hydrotropic substances

Appearance: colourless liquid

Stability: against alkali, acids and electrolytes in usual concentrations

Degradability: completely biodegradable

MODE OF ACTION:

The remarkable hydrotropic, fat emulsifying and dispersing properties of MERPIN 8010 N allow to remove dirt and manure.

Even when processing raw material with a higher degree of natural fat, the water absorption of the hides is obtained rapidly and evenly over the whole crosssection. This action leads to an acceleration of the soaking.

FIELDS OF APPLICATION:

- soaking of partially dried hides and skins
- soaking of raw material containing a high degree of natural fat
- to shorten the soaking period

QUANTITIES TO USE:

0,1 - 0,5 % MERPIN 8010 N, based on the salted weight

The dosage of MERPIN 8010 N depends on the predicted soaking time, the condition of the raw material, the float length etc.

STORAGE HINT:

Protect from cold.
