

MERPIZYM 8008

Enzymatic soaking auxiliary

Base: combination of proteolytic enzymes and hydrotropic substances

Appearance: white powder

Active matter: 98 - 100 %

Electric charge: anionic

pH-value: 9,5 – 10,5 (10 % in water)

MODE OF ACTION:

MERPIZYM 8008 removes low- and unstructured proteins from the hides and emulsifies the resting natural fat. This action leads to an acceleration of the soaking and causes a rapid and even penetration of the liming chemicals.

When used on fresh hides, MERPIZYM 8008 obtains an excellent removal of blood and rests of blood from the entire crosssection.

APPLICATION:

Field of application:

-soaking of salted and fresh hides

QUANTITIES TO USE:

0,1 - 0,4 % MERPIZYM 8008, based on the salted- or green weight

The dosage of MERPIZYM 8008 depends on the predicted soaking time, the condition of the raw material, the float length, pH and temperature etc.

STORAGE HINT:

Store in a cool and dry place.

May-17
